# START, LOOK AND LISTEN

## Common car noises and what they might be indicating

Although there are many drivers who understand what goes on under the hood of a vehicle and the inner workings of car mechanics, there are plenty of others who might not know a spark plug from a dipstick. For the latter group, random noises when driving can be a cause for immediate alarm.

Certain noises can be innocuous and easily fixed, while others may be indicative of something more complex. Pinpointing where a noise is coming from can help vehicle owners identify the problem. Here's a list of some common sounds and what the causes might be,

courtesy of Firestone, Geico and Nationwide.

**High-pitched squealing**  
Screaming or squealing coming from the tires when stepping on the brakes likely means that brake pads are wearing down and the indicator is rubbing against the rotor. Although this is not an emergency situation, it does mean that brakes will need to be replaced sooner than later.

**Rattling in the wheel**  
If you hear rattling inside of a wheel

at low speeds which stops as you drive faster, it could mean there is a loose lug nut inside of the hub cap. That wheel wasn't tightened properly the last time it was removed and replaced. Bring the car to a mechanic as soon as possible.

**Clicking**  
If you try to start the car and only hear a clicking sound instead of the car turning over, a dead battery is likely the cause. Such a noise also may indicate corroded battery terminals that are preventing the current from flowing. Terminals need to be cleaned. The battery should be checked and jumped, if necessary. If a battery is not holding a charge, a new one is needed.

wheels. Damaged struts also can cause clunking. Worn out leaf spring shackles that help in off-roading conditions also can cause clunking when they bend or break.

**Humming, whining or whirring**  
These strange noises might have different origins. Check if the differential needs to be lubricated. A wheel bearing also could be worn out and produce a noise. In more severe cases, the transmission could be failing. The best course of action is to get a professional opinion from a mechanic.

**Squeaky or scraping windshield wipers**  
Squeaking and scraping means the windshield wipers are wearing down or the windshield is dirty. Clean the windshield and inspect the wiper blades to make sure they are in working order. A bad wiper and dirty windshield can reduce visibility and make driving dangerous.

**Clunking sounds**  
Clunking sounds may indicate a few different issues. A clunking sound might indicate worn out shock absorbers, which absorb vibrations from the

**Flapping noise**  
A broken belt typically is the culprit when a vehicle makes a flapping or slapping noise. Something also may be interfering with the fan. Driving with a broken belt may cause severe engine damage, so it's important to address the issue.

**Squealing under the hood**  
Squealing can indicate worn or loose accessory belts. In newer cars it might be the serpentine belt. Belts are relatively inexpensive and easy fixes.

These are some of the sounds that vehicles can make when something is awry. Figuring out the issue can prevent further damage.
